This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.

M_2 , the integral being taken from $/u$, $= -1$ to $/U = +1$. Secondly, if r is expressed in terms of the cosines of the multiples of θ , put $\cos \theta = anP_n + an siP_n^2 + an^4P_4 + \dots$, the general term of which is $an-tmPn-imi$ ani $an-2m$ may be determined by a similar process applied to the fourth expansion of Prop. vi., but in this case it will be generally simpler to assume for r a series of the form $a_0P_0 + P_1 + \dots + anP_n$, n being the highest number by which the arc θ is multiplied, then substituting for P_0 , P_1 P_2 , c . their values given by the fourth expansion, equate the...
